

## NARCOTIC NOTICE TO PATIENTS

Oxmoor Medical Group, LLC, will NOT provide prescriptions for hypnotic sedatives, stimulants, and other controlled drugs to new patients, unless it is deemed necessary by the physician. If long-term pain management is needed as part of a patient's total medical care, an appointment with a chronic pain management facility is recommended and should be scheduled by the patient. All patients, new and established, are subject to query at the State of Alabama Department of Public Health Prescription Drug Monitoring Website for verification of narcotic/analgesic use and/or random drug screening.

If a new patient should request a narcotic/analgesic prescription for a chronic/long term condition after they have read, understood and agreed to this policy, as indicated by their signature, the request will be denied and possible dismissal of medical services will be enacted at the physician's discretion. Also, if at any time, Oxmoor Medical Group receives a report that a patient, new or established, is receiving inappropriate or duplicate prescriptions of narcotics/analgesics from another physician, the patient will be immediately dismissed from receiving medical services from Oxmoor Medical Group.

I have read and understood the Narcotics Policy from Oxmoor Medical Group and agree to follow this policy as a patient of Oxmoor Medical Group.
